

4X4 ACCESSORIES

NEW PRODUCT ADVICE

DESCRIPTION:

Snatch Block 9000

APPLICATION:

Vehicle recovery

PART NO:

10100020

AVAILABILITY:

Now

FEATURES:

- Working load rating of up to 9000kg
- Press formed plates are made from heavy gauge carbon steel
- Unique new computer optimised design actually presses the plates against each other under load for extra support
- Drawn, rounded safety edges mean no more pinch points while rushing through a recovery, and easy one handed loading and unloading of the rope or cable
- Self-righting design of plates eliminates the need to worry about the position of the block while introducing cable tension
- Vanadium steel axle is oil impregnated into a hardened surface for a tough, long lasting finish that requires no additional lubrication
- Revolutionary two piece pulley design made from a composite of aerospace grades of impact modified, self lubricating polymers
- Outer pulley material greatly reduces wear and damage to steel cables and reduces fretting and damage to plasma type cables as compared to metal pulley snatch blocks
- Inner pulley material is made from a highly specialised bearing grade of self lubricating crystalline polymer
- High strength, low density materials have allowed for a total weight reduction of up to 50% over other comparable rated snatch blocks which improves results during timed competition
- Suitable for use with bow shackle sizes up to 8.5 ton and plasma rope and steel cable up to 13mm in diameter
