Summit Bull Bar

Utilising 60.3mm outer frame and cross bar tubing, as well as an extensive use of press forming in the construction, the NP300 Summit bull bar has been designed with a relentless pursuit of quality. The bar uses a split pan design for maximum strength and airflow as well as under wing protection panels to protect the vulnerable lower parts of the NP300. The bar is able to accommodate a range of low mount electric winches, up to 10,000lb, along with twin Hi-Lift jack points to assist with difficult recovery situations. Provisions for ARB Intensity LED and IPF driving lights are integrated into the top pan of the bar, while the redesigned fog light surrounds and ARB LED indicator/clearance light assembly is included as standard.

Side Rails and Steps

Side rails and protection steps integrate with the Summit bull bar, offering protection to vulnerable quarter and door panels. The patented side rail attachment system provides uncompromised strength while the all-new, clear anodised tread plate provides easy ingress/egress to the vehicle in all weather conditions. A stand alone protection step is also available for the NP300.

Rear Step Tow Bar

The all new Summit rear step tow bar is a class leading rear protection and tow system designed to appear as original vehicle equipment in finish and integration. The through tub mounting system attaches to the chassis to provide exceptional levels of strength. A 50mm, 3.5t tow hitch enables heavy trailers, caravans or boats to be connected with ease, while also allowing the use of a hitch mounted recovery point. A lift up cover panel conceals trailer electrics, with the option to fit an ARB air compressor outlet, rear camera connection and a 50amp Anderson plug.

Classic Canopy

Available in a smooth or textured exterior finish, the ARB Classic canopy for the new Navara features curved, tempered and tinted safety glass to follow the contour of Nissan's unique tailgate spoiler. The canopy shell also accommodates the protrusion of the vehicle's third safety lamp. Manufactured from tough ABS thermoplastic, the canopy can be colour coded to suit the vehicle paintwork.

Canopy Roof Rack

Available in two sizes for the NP300, both steel and aluminium models are available, both of which incorporate an aerodynamic, durable design, perfect for carrying timber, ladders and a variety of other equipment.

Air Lockers

Designed and manufactured in Australia, ARB Air Lockers will enhance the traction of the NP300 in just about any terrain. With a state-of-the-art two piece design, forged gears for the ultimate in strength and durability, and an industry-leading five year warranty, ARB Air Lockers combine quality equipment with a reliable backing. A rear Air Locker for the NP300 is available to order now, while a front Air Locker for automatic NP300 vehicles is currently being finalised and will be available to order shortly.

Outback Solutions Drawers

Featuring an integrated sleek design, high quality components, and the ability to create a fully customised system tailored to owners' requirements, the Outback Solutions range is the answer to all storage needs. Completely modular, the Outback Solutions range provides up to 200 possible configurations for the NP300.

Under Vehicle Protection

Extensive under vehicle protection panels have been specially developed for the NP300. Fabricated from 3mm pressed and folded laser cut steel, these four panels protect the sump, transmission and transfer case from hazards off road. All panels are zinc plated and powder coated for a visually pleasing appearance.

Rated Recovery Points

Designed for use with an ARB bull bar, ARB rated recovery points are mounted directly to the vehicle chassis via high tensile bolts. Rated to 8000kg, the NP300 recovery point attaches to the left or right hand side of the vehicle, or both, depending on customer preference, and has been rated for angled pulls up to the maximum turn angle of the front wheels. The long slot allows the recommended 4.75t bow shackle to be fed through the opening and connected to the strap using the pin instead of the bow.

Coming Soon

In addition to the above, the following list of products for the NP300 will be available soon, throughout ARB stores and stockists across Australia.

ARB Alloy Bar
ARB Sahara Bar
ARB Commercial Bar
ARB Ascent Canopy
Old Man Emu Suspension
ARB Ute Liner
ARB Ute Lid
Safari Snorkel
Auxiliary Battery Tray
Long Ranger Fuel Tank
Recaro Seats
Clearview Towing Mirrors
SmartBar
Hayman Reese Towbar

About ARB

Founded in 1975 in Melbourne, ARB 4x4 Accessories is now Australia's largest manufacturer and distributor of aftermarket 4WD accessories. With products including bull bars, protection equipment, Old Man Emu suspension, Air Lockers, roof racks, canopies and recovery equipment, our primary mission is to prepare vehicles for the remote and harsh conditions typically encountered off road. ARB currently has more than 50 stores and over 100 stockists located across Australia, as well as offices in the United States, Thailand and Europe, and an export network reaching more than a hundred countries around the world.

The ultimate camping accessory no adventurer can live without has finally hit the shelves at ARB. After extensive research and development, ARB has designed a sleeping bag with features that set it apart from the competition. Ideal for indoor and outdoor use during the colder seasons, the ARB sleeping bag is the perfect companion for the adventurous soul.

The ARB sleeping bag – now available in stores – was designed with warmth, comfort and durability in mind. Manufactured with anti-bacterial and fire retardant treatments, the ARB sleeping bag is also machine washable. Weighing as little as 2.9kg, the sleeping bag is compact, lightweight and will even retain its ability to insulate when damp or wet. Perfect for adult 4WDer's of all shapes and sizes, the sleeping bag boasts the luxurious size of a king single (200cm x 100cm x 100cm) offering plenty of room to move, keeping you warm and rested up during your adventure.

Manufactured from the highest quality materials, ARB has ensured their sleeping bag will be your best friend on a cold and dreary night. To ensure its comfort rating of -5°C, the sleeping bag is filled with high quality invista Dupont Thermolite® QUallo 7 hole fill. Holding all of this together is a 100% cotton brushed flannelette inner lining, treated with Sanitized® anti-bacterial treatment for maximum hygiene protection and longevity. The nylon outer shell not only displays a sleek black and stone design with ARB topographic print, but also has fire retardant treatment to CPAI-75 standards for added protection. Made with genuine YKK® zippers, a single continuous main zipper with added secure Velcro closure ensures you keep snugly warm and draught-free during the night.

The unique design of the ARB sleeping bag makes joining two to make a double, simple and easy. There's no need for a left and right hand model as fully unzipping two bags and laying one on top of the other means that the joining zipper runs around the outer edge, not up the middle between the occupants. This allows each occupant to exit the sleeping bag via a side zipper, so that the other occupant can stay snug and warm. When the second sleeping bag is placed on top, the hood/pillow can be easily removed from the top bag and zipped to the bottom bag to complete your tailor made sleeping setup.

Providing ultimate head support and comfort, the semi-circular hooded section includes a pocket to insert a standard sized pillow and can also be removed for convenience. Designed for maximum security, two handy stash pockets are provided to keep your valuable items close and safe but also so they don't get lost in the bottom of your bedding. Perfect for personal items such as mobile phones, wallets or even a small torch, there is one on either side of the main zipper.

The generously sized rectangular stuff sack allows room for the sleeping bag to be folded before being placed in the sack, as opposed to 'stuffing' which is often very difficult with traditional stuff sacks. A draw cord and compression straps allow the stuff sack to be compressed to a much smaller size. And finally, when fully packed, the entire shebang takes the shape of a rectangle, so it can be easily stored between the fridge and the fishing tackle box, ready for your next adventure.

HEADLINE GOES HERE

ARB Corporation Ltd, a world leader in aftermarket 4x4 accessories, is pleased to announce the latest addition to their comprehensive canopy line up. The ARB Ascent canopy is establishing an entirely new segment within the growing canopy market, by providing dual cab utility owners with a fully featured, ultra-premium option.

Designed to exceed the expectations of the most discerning owners, the Ascent is the result of proven ARB design unified with class leading aesthetics and technological advancements. This next generation canopy is fabricated around an innovative vanishing edge shell design, allowing the tray of the vehicle and canopy to integrate seamlessly – with no visible weather sealing.

The frameless windows are premium quality – 5mm tempered auto glass with dark grey, 28% light transmission tinting. This ensures cargo is protected from UV penetration while enhancing the fundamental design of the canopy. An ‘invisible’ hinge system complements the clean styling of the canopy, and a unique rear spoiler with a third LED brake light ensures high visibility in all driving conditions. Vacuum formed from 9mm ABS thermoplastic, the Ascent canopy is manufactured to withstand temperature extremes ranging from -20°C to 90°C.

A standout feature of the new Ascent is the fully integrated remote central locking system. Utilising the existing vehicle key remote, owners are able to lock and unlock the canopy as they would the vehicle. The central locking system installs into the factory wiring through the use of a plug and play wiring loom, ensuring that ‘splicing’ is not required and vehicle wiring integrity is maintained.

In addition to central locking, all doors and windows feature slam shut closing.

Easy to activate push button micro switches allow one handed opening – eliminating the need for mechanical handles – and the rear door includes manual key override.
